Come explore the beautiful and unique redrock of the famous Moab region of Utah in this easy to read and informative journey through deep geologic time. Discover the fascinating forces that created this amazing landscape as you journey with two geologists who have spent their lives exploring this area. The incredible redrock landforms of Arches and Canyonlands National Parks were originally laid down in the Mesozoic Era, which is the focus of this book. The tectonic and sedimentary forces that created these mysterious formations are discussed, as well as the Dinosaurs and many other curious and strange life forms. This artists' and photographer's paradise provides an unparalleled and exquisite canvas for the geologist, as well as the casual observer. You'll also enjoy "Seven Best Hikes in Colorado National Monument" by Roger Miller and available here on Amazon.
